Create a summary spreadsheet

You need a performance summary for the Q1 2026 management meeting. The available materials also include reports from other periods and documents still under review.

Create an Excel file showing revenue, operating profit, and operating margin for the Solutions, Services, and Global divisions, along with overall totals. Use only approved Q1 2026 results. Show amounts in KRW millions and operating margins to two decimal places.

The spreadsheet will be reused next quarter with updated figures. Make sure totals and operating margins are calculated automatically. Save the Excel file (.xlsx) for the meeting in the Results folder.

When you finish or cannot continue, return to this page and select Record progress.
